

Company Introduction

WarOnCancer is a tech company on a mission to radically improve mental health for everyone affected by cancer through the ongoing development of the WarOnCancer App – a social networking app for patients, survivors and loved ones.

By uniting on a global platform, we are working towards building an infrastructure where our members can contribute their data to the larger cancer ecosystem, and hence play an essential part in accelerating healthcare and improving research.

We value Norm-Challenging, Collaborative people with Integrity, and we believe you do the same!

Job Description

We are looking for a senior software engineer or tech lead to join our mission to deliver a superb WarOnCancer experience across all our platforms and apps (today iOS and Android). You will be working hands-on with software development, as well as leading the team and be responsible for technical vision, decisions, and to keep growing our tech team.

We believe you have a passion for coding and development, as well as leading the team through caring about team process, understanding future technical needs and building a technical roadmap.

Responsibilities

- We are looking for a software engineer, responsible for leading the development team and for its technical deliverables. This is the definition that we are using: <https://www.thekua.com/atwork/2014/11/the-definition-of-a-tech-lead/>
- You will work with our COO and Product Manager to manage and further build our tech team, currently split across two countries.
- Create a roadmap for the product together with our Product Manager, where you will be responsible for the technical aspects, such as choice of frameworks and architecture.
- Take active part in the coding and development in the team.
- Develop, lead and inspire the team. Be a magnet for technical talent and accelerate the hiring of engineers.
- Promote a culture of success, pride, performance, discipline, and creativity.
- Follow and spread trends on modern technology and architecture.

Requirements

- At least five years' experience as software engineer in agile and test-driven software development.
- A strong interest in having the overall responsibility for the software architecture and leading the team.
- Strong computer science foundation.
- Expertise building big-data analytic solutions with appropriate use of relational and NoSQL database technologies.
- Fluency in multiple programming languages for app development.
- Experience of developing in React Native.
- A bonus is background in the life-science domain.
- Resourceful, adaptable and persistent. This is a startup. There are huge and endless possibilities and we already have various partnerships in place. However, you will need to think lean and enjoy the true startup mentality, dig in and get your hands dirty in order to reshape the future of healthcare. Only the passionate need apply!
